13 Reports & Exports 15

14 Audit Log Workflow 16

How to read this document: Each section follows a consistent structure — Purpose, Roles Involved, Step-by-Step Process, Status Flow, System Actions, and any automatic inventory effects. Read sections sequentially for full understanding, or jump directly to any workflow using the links above.

01 SYSTEM FOUNDATION

Login & Role-Based Access

> *Controls how users authenticate to the system and how their role determines what they can see and do across all modules.*

Authentication Process

1. **User navigates** to the Mirsad web application and is presented with a login screen.
2. **User enters** their registered email address and password.
3. **System validates** credentials against the database. If correct, a signed **JWT token** is returned and stored securely in the browser.

   > The token expires after the configured session duration. Users must re-login when it expires.
4. **System reads** the user's assigned role and project from the token payload.
5. **User is redirected** to the Dashboard. Navigation menu items are shown or hidden based on the user's role.
6. **On each API request**, the server validates the JWT token and role permissions before processing the request. Unauthorized access returns a 403 error.
7. **User logs out** — the token is cleared from the browser and the session ends immediately.

Role Assignment

Only Admins can create and assign roles. Users cannot self-register. The Admin creates user accounts through the User Management panel and assigns a role and project at account creation.

Session Management

TOKEN BEHAVIOR

- JWT stored in browser session
- Automatically sent with every API call
- Expires after configured duration
- Cleared on logout or expiry

ACCESS GUARDS

- Route-level protection in the UI
- API-level authorization on every endpoint
- Project-scoped data isolation
- Invalid tokens auto-redirect to login

Status Flow

Anonymous (Not Logged In) → Login → Authenticated (Role Assigned) → Logged Out

02 SYSTEM FOUNDATION

User Roles & Permissions

Defines the five system roles, their responsibilities, and the modules each role can access and manage.

Role Definitions

Role	Arabic Title	Primary Responsibilities
Admin	مدير النظام	Full system control — users, projects, settings, all modules, reports
Supervisor	مشرف	Manage operations, approve floor checks, handle inventory, purchasing
Assistant Supervisor	مساعد مشرف	Support daily operations, submit floor checks, manage requests
Project Manager	مدير مشروع	Oversee project-level data, approve reports, manage client requests
Client	عميل	Submit requests, view own requests, confirm delivery

Module Access Matrix

Module	Admin	Supervisor	Asst. Sup.	Proj. Mgr	Client
Dashboard	✔ Full	✔ Full	✔ Full	✔ Full	◗ Limited
Client Requests	✔ Full	✔ Manage	✔ Manage	✔ Manage	◗ Own only
Coffee Break Requests	✔ Full	✔ Manage	✔ Manage	✔ Manage	✗
Operation Requests	✔ Full	✔ Manage	✔ Manage	✔ Manage	✗
Purchase Orders	✔ Full	✔ Full	◗ View	✔ Full	✗
Receiving	✔ Full	✔ Full	✔ Full	✔ Full	✗
Food Inventory	✔ Full	✔ Full	◗ View	✔ Full	✗
Materials Warehouse	✔ Full	✔ Full	◗ View	✔ Full	✗
Floor Checks	✔ Full	✔ Approve	✔ Submit	◗ View	✗
Maintenance Requests	✔ Full	✔ Manage	✔ Report	✔ View	✗
Reports & Exports	✔ Full	✔ Full	◗ Limited	✔ Full	✗
Audit Logs	✔ Full	◗ View	✗	◗ View	✗
User Management	✔ Full	✗	✗	✗	✗

Legend: ✔ Full = create, read, update, delete & approve · ◗ Limited = read + specific actions · ✗ = no access to this module

03 DAILY OPERATIONS

Dashboard Workflow

> *The Dashboard is the central control panel for the cafeteria operation. It provides real-time visibility into all active operations, alerts, inventory health, and pending approvals without needing to navigate to individual modules.*

Dashboard Sections

Widget	What It Shows	Refresh
KPI Row	6 live counters: Operation Requests open, Coffee Break Requests open, Receiving Today, Active Purchase Orders, Low/Out-of-Stock items, Active Alerts	Every 30 seconds
Inventory Health	Food Inventory bar chart: Available / Low Stock / Out of Stock / Over Consumed. Materials Inventory: same + Shortages / Transfers / Maintenance	Every 30 seconds
Latest Requests	Last 5–10 Operation Requests and Coffee Break Requests with status and floor	Every 30 seconds
Recent Receiving	Last deliveries — supplier, date, item count, invoice, status	Every 30 seconds
Purchase Orders	Recent POs with received % progress bar and status	Every 30 seconds
Low Stock Items	All items below threshold — name, type, remaining qty vs. limit	Every 30 seconds
Floor Checks & Safety	Today's floor check completion %, expiring items, spoilage alerts, corrective actions open	Every 30 seconds
Analytics	Top consumed items (bar chart), Checks by floor (bar chart)	Every 30 seconds
Recent Activity	Audit trail of last 8 system actions with actor name and timestamp	Every 30 seconds

Roles Involved

- **All roles** — can view the dashboard (content varies by role)
- **Admin / Supervisor / Project Manager** — see all KPIs and inventory data
- **Client** — sees only their own requests summary

Export Actions from Dashboard

- Each table widget has an **Export button (↓)** that downloads the corresponding Excel report instantly.
- Available exports: Operation Requests, Coffee Break Requests, Receiving records, Purchase Orders, Inventory Report.

Auto-refresh: All dashboard data refreshes every 30 seconds automatically. No manual page reload is needed during live operations.

04 DAILY OPERATIONS

Client Request Lifecycle

> *Manages requests submitted by ministry clients for catering, supplies, events, housekeeping, and other services. Tracks the full lifecycle from submission to delivery confirmation.*

Roles Involved

Role	Action
Client	Creates request, confirms delivery
Supervisor / Assistant Supervisor / Project Manager / Admin	Assigns, starts fulfillment, marks delivered, can reject

Request Types

AVAILABLE REQUEST TYPES

- Catering (طعام)
- Maintenance (صيانة)
- Supplies (مستلزمات)
- Event (فعالية)
- Housekeeping (تنظيف)
- Other (أخرى)

PRIORITY LEVELS

- 🔴 Urgent — immediate action required
- 🟠 High — same-day resolution
- 🟡 Medium — within schedule
- ⚪ Low — non-urgent

Step-by-Step Process

1. **Client submits** a new request — fills in title, type, description, priority, expected delivery date, and optional item list (name, quantity, unit).
2. **System records** the request with status *Submitted* and logs the creation in the audit trail.
3. **Supervisor / Manager** reviews the new request on the Client Requests page or Dashboard. Selects an assignee and clicks *Assign*.
4. **Status changes** to *Assigned*. The assigned team member is notified.
5. **Assigned user** begins work and clicks *Start Fulfillment*. Status changes to *In Progress*.
6. **When service/items are delivered**, the manager clicks *Mark Delivered*. Status changes to *Delivered*.
7. **Client logs in**, reviews the delivery, and clicks *Confirm Delivery*. Status becomes *Confirmed*. Workflow ends.
8. **Optional — Rejection:** At any stage before Confirmed, a manager can reject the request with a written reason. Status changes to *Rejected*.

Status Flow

Submitted → Assigned → In Progress → Delivered → Confirmed / Rejected

Note: Client Requests do not automatically deduct inventory. If physical items are consumed (e.g., supplies, catering materials), a separate inventory transaction or operation request must be created to record the consumption.

05 DAILY OPERATIONS

Coffee Break Request Workflow

> *Manages daily and event-based coffee break and hospitality service requests across ministry floors. Designed for speed — requests move quickly from submission to floor delivery.*

Roles Involved

Role	Action
Supervisor / Assistant Supervisor / Project Manager / Admin	Create request, assign, manage delivery
Supervisor / Project Manager	Approve and mark delivered

Step-by-Step Process

1. **Authorized user creates** a Coffee Break Request — specifies floor, requested items (coffee type, quantities, pastries, etc.), expected delivery time, and priority.
2. **System creates** the request with status *Submitted* and shows it on the Dashboard Coffee Break widget.
3. **Supervisor/Manager assigns** the request to a service team member. Status → *Assigned*.
4. **Service team member** begins preparation and service. Status → *In Progress*.
5. **Items are delivered** to the floor. Manager marks *Delivered*. Status → *Delivered*.
6. **Request is confirmed** (by supervisor or auto-confirmed). Status → *Confirmed*.

Status Flow

Submitted → Assigned → In Progress → Delivered → Confirmed

Inventory Impact

Automatic Deduction: When a Coffee Break Request is marked *Delivered*, the system automatically deducts the specified quantities from the applicable inventory balances (coffee beans, milk, sugar, pastry items, etc.) for the relevant project period. A stock movement record of type *issued* is created.

Dashboard Visibility

- Coffee Break Requests open count shown in the KPI row on the Dashboard.
- Latest 5 requests shown in the Coffee Break Requests table widget.
- Export available as Excel from the dashboard widget header.

06 DAILY OPERATIONS

Operation Request Workflow

> *Handles internal operational requests for meal preparation, floor distribution, supplies dispatch, and daily cafeteria service execution. Triggered by the operations team — not by clients.*

Roles Involved

Role	Action
Supervisor / Assistant Supervisor / Admin	Create and manage operational requests
Project Manager / Admin	Approve and confirm completion

Step-by-Step Process

1. **Operations staff creates** a new Operation Request — specifies request title, target floor, items needed, quantities, and priority.
2. **System creates** the request with status *Submitted*. Appears on the Dashboard Operation Requests widget.
3. **Supervisor reviews** the request and assigns it to available staff. Status → *Assigned*.
4. **Staff begins** the operation (preparation, distribution, etc.). Status → *In Progress*.
5. **Operation is completed** — items delivered to the floor. Manager marks *Delivered*. Status → *Delivered*.
6. **Request confirmed** by supervisor or project manager. Status → *Confirmed*.
7. **If an issue arises**, request can be *Rejected* with a rejection reason recorded for audit.

Status Flow

Submitted → Assigned → In Progress → Delivered → Confirmed / Rejected

Inventory Impact

Automatic Deduction: When an Operation Request is confirmed as *Delivered*, the specified food or material quantities are automatically deducted from the inventory balance for the project period. The system records a stock movement of type *consumed*.

Daily Plan Link: Operation Requests can optionally be linked to a Daily Plan. When linked, the planned quantities are pre-filled from the daily plan line items, reducing data entry errors.

07 PROCUREMENT & RECEIVING

Purchase Order Workflow

> *Manages monthly purchase orders issued to approved suppliers for food and materials. Tracks approved quantities, received quantities, distributed quantities, consumption, and variance — all linked to the monthly period.*

Roles Involved

Role	Action
Admin / Supervisor / Project Manager	Create, edit, and manage purchase orders
Admin / Project Manager	Close purchase orders
All operational roles	View purchase orders and progress

Purchase Order Structure

PO HEADER

- PO Number (auto-generated)
- Supplier (from approved list)
- Project
- Month (e.g., 2024-11)
- Start date / End date
- Status
- Notes

PO LINE ITEMS

- Item (food or material)
- Unit (pcs, kg, L, etc.)
- Approved Qty
- Received Qty (auto)
- Distributed Qty (auto)
- Consumed Qty (auto)
- Remaining Qty (auto)
- Variance (auto)

Step-by-Step Process

1. **Admin/Supervisor creates** a new Purchase Order — selects supplier, project, month, and adds line items with approved quantities.
2. **PO is saved** with status *Active*. PO number is auto-generated (e.g., PO-2024-11-001).
3. **Supplier delivers goods** → a Receiving record is created referencing this PO. Each received quantity is recorded per line item.

   > The system automatically updates ReceivedQty on each PO line when a Receiving record is confirmed.
4. **Status updates automatically** as quantities are received: *Partially Received* when some lines are received, *Fully Received* when all lines reach 100%.
5. **As items are consumed** (through Operation Requests and Coffee Break deliveries), ConsumedQty and RemainingQty are updated automatically on each line.
6. **System monitors** remaining quantities. Status changes to *Near Depletion* when remaining falls below threshold, or *Over Consumed* if consumption exceeds approved quantity.
7. **At end of period**, Admin or Project Manager closes the PO. Status → *Closed*. Variance is finalized.

Status Flow

Active → Partially Received → Fully Received → Near Depletion / Over Consumed → Closed

Automatic Inventory Update: Receiving confirmation automatically increases ReceivedQty on PO lines and updates the project's inventory balance (openingBalance + receivedQty). Consumption events reduce RemainingQty and update consumedQty.

08 PROCUREMENT & RECEIVING

Receiving Workflow

> *Records the physical delivery of goods from suppliers against approved Purchase Orders. Each delivery is inspected, quantities are verified, item conditions are recorded, and inventory is updated automatically upon confirmation.*

Roles Involved

Role	Action
Supervisor / Assistant Supervisor / Project Manager / Admin	Create and submit receiving records
Supervisor / Project Manager / Admin	Confirm or reject receiving records

Step-by-Step Process

1. **Supplier arrives** with goods. The receiving officer opens a new Receiving record and links it to the relevant Purchase Order.
2. **System pre-fills** PO line items with ordered quantities. The officer adjusts received quantities per item based on actual delivery.
3. **For each line**, the officer records:
   4. Quantity received
   5. Condition: *Good / Damaged / Rejected*
   6. Batch number (optional)
   7. Expiry date (for food items)
   8. Notes (for damaged or short deliveries)
9. **Invoice number** is entered. The record is saved with status *Pending*.
10. **Supervisor/Manager reviews** the receiving record and clicks *Confirm*. Status → *Confirmed*.
11. **System automatically:**
    12. Updates PO line ReceivedQty for each confirmed line item
    13. Updates PO status (Partially/Fully Received)
    14. Increases inventory balance (receivedQty) for the project period
    15. Creates a Batch record for each food item (FIFO/FEFO tracking)
    16. Creates a Stock Movement record (type: received)
17. **If delivery is partly acceptable**, status can be set to *Partial* — only confirmed lines affect inventory.
18. **If delivery is fully rejected**, status → *Rejected*. No inventory impact. A rejection reason is recorded.

Status Flow

Pending → Confirmed / Partial / Rejected

Damaged Items: Damaged line items do not increase usable inventory. They are recorded separately as damagedQty and flagged for corrective action or supplier claim.

09 INVENTORY MANAGEMENT

Food Inventory Workflow

> *Tracks monthly food inventory balances per project. All received goods, consumption events, spoilage, and transfers are recorded and reflected in real-time inventory balances with FIFO/FEFO rotation enforcement.*

Roles Involved

Role	Action
Supervisor / Project Manager / Admin	View, manage, and adjust inventory balances
Supervisor / Assistant Supervisor	Record stock movements, transfers, spoilage
Admin	Set monthly limits, manage items and categories

Inventory Balance Fields (per Item per Period)

Field	Description	Updated By
Monthly Limit	Maximum approved quantity for the month	Admin (set)
Opening Balance	Carryover from previous period	System (auto)
Received Qty	Total goods received from suppliers	Receiving confirmation
Consumed Qty	Quantity used in service operations	Operation / Coffee Break delivery
Issued Qty	Quantity issued via floor transfers	Transfer confirmation
Damaged Qty	Spoiled or damaged items recorded	Spoilage / Receiving
Returned Qty	Items returned to warehouse	Manual return entry
Remaining Qty	Current usable stock = Opening + Received − Consumed − Issued − Damaged + Returned	Auto-calculated

Inventory Status Logic

Status	Condition
Available	Remaining Qty > 20% of Monthly Limit
Low Stock	Remaining Qty between 1–20% of Monthly Limit
Out of Stock	Remaining Qty = 0
Over Consumed	Consumed Qty > Approved / Monthly Limit

FIFO / FEFO Batch Tracking

- Each received food item creates a **Batch record** with batch number, expiry date, and storage zone.
- When items are consumed or issued, the oldest batch (by expiry date — FEFO) is depleted first.

- Batches near expiry (within 3 days) trigger **Spoilage Alerts** visible on the Dashboard.
- Expired or spoiled batches are marked and deducted from usable inventory.

Status Flow

Available → **Low Stock** → **Out of Stock** / **Over Consumed**

10 INVENTORY MANAGEMENT

Materials Warehouse Workflow

> *Manages non-food materials inventory — packaging, disposables, cleaning supplies, coffee station materials, hospitality items, and consumable equipment. Tracks stock levels and floor-to-warehouse transfers.*

Roles Involved

Role	Action
Supervisor / Project Manager / Admin	View and manage materials inventory
Supervisor / Assistant Supervisor	Create and confirm transfers, record usage

Materials Categories (Storage Zones)

STORAGE ZONE TYPES

- Cold Storage
- Chilled
- Ambient
- Freezer
- Dry Storage
- Coffee Station
- Hospitality

MATERIAL TYPES TRACKED

- Coffee beans & blends
- Tea, sugar, syrups
- Milk (fresh, plant-based, condensed)
- Disposable cups, stirrers, napkins
- Cleaning materials
- Packaging supplies
- Water & beverages

Transfer Workflow (Warehouse → Floor)

1. **Supervisor/Assistant creates** a new Transfer — selects the target floor and adds line items with quantities to be issued from the warehouse.
2. **Transfer is saved** with status *Draft*. Items are not yet deducted.
3. **Supervisor reviews** the transfer and clicks *Confirm*. Status → *Confirmed*.
4. **System automatically deducts** the transferred quantities from the warehouse inventory balance (issuedQty increases, remainingQty decreases). A Stock Movement record of type *issued* is created.
5. **If transfer is cancelled**, status → *Cancelled*. No inventory impact.

Transfer Status Flow

Draft → Confirmed / Cancelled

Inventory Status (same as Food)

Available → Low Stock → Out of Stock

Shortage Alerts: When any material item falls below its set minimum level, it appears in the Low Stock Items list on the Dashboard and in the Materials Inventory bar on the Inventory Status widget.

11 FACILITY & QUALITY

Maintenance Request Workflow

> *Handles all facility maintenance and repair requests — from minor equipment faults to critical infrastructure issues. Requests are categorized, prioritized, assigned to technicians, and tracked to resolution.*

Roles Involved

Role	Action
Any operational role	Report a maintenance issue (create request)
Supervisor / Project Manager / Admin	Review, assign, and close requests
Assigned technician	Update progress and mark resolved

Request Categories & Priorities

CATEGORIES

- Electrical
- Plumbing
- HVAC (Air Conditioning)
- Equipment
- Cleaning
- Structural
- Other

PRIORITY LEVELS

- 🔴 Critical — immediate shutdown risk
- 🟠 High — major impact, same-day fix
- 🟡 Medium — scheduled within 48h
- ⚪ Low — routine maintenance

Step-by-Step Process

1. **Staff member reports** an issue by creating a Maintenance Request — title, description, location (building/floor), category, and priority.
2. **System records** the request with status *Open* and shows it on the Maintenance Requests page and Dashboard counter.
3. **Supervisor/Manager reviews** the request and assigns it to a technician. Status → *Assigned*. Assigned date is recorded.
4. **Technician begins work**. Status updated to *In Progress*.
5. **Technician resolves** the issue and records the resolution description. Status → *Resolved*. Resolution date is recorded.
6. **Supervisor reviews** the resolution and closes the request. Status → *Closed*.
7. **Notes/photos** can be added at any step for audit and follow-up purposes.

Status Flow

Open → Assigned → In Progress → Resolved → Closed

Corrective Actions: High or critical maintenance issues that impact food safety can automatically generate a Corrective Action record, which is tracked separately in the Food Safety module until fully resolved.

Approval Process

> *The approval process governs Floor Check reports and other regulated operational records, ensuring that data is reviewed, verified, and authorized through a structured chain of command before being finalized.*

What Requires Approval

- **Floor Checks** — daily inspection reports submitted by supervisors per floor and shift.
- **Receiving Records** — delivery confirmations require supervisor sign-off.
- **Transfers** — warehouse-to-floor transfers require supervisor confirmation.
- **Client Request Delivery** — client must confirm receipt to close the request.

Floor Check Approval Chain

1. **Assistant Supervisor** creates a Floor Check for a specific floor and shift. Fills in actual quantities vs. planned quantities for each item. Status → *Draft*.
2. **Assistant Supervisor submits** the report. Status → *Submitted*. An approval record is created.
3. **Supervisor reviews** the submitted floor check. Status → *Under Review*.
4. **Supervisor can:**
   5. *Approve* → Status changes to *Approved*. Inventory balances are finalized.
   6. *Return* → Status changes to *Returned*. Notes given to assistant for correction.
   7. *Reject* → Status changes to *Rejected*. Reason is recorded.
8. **If Returned**, the assistant supervisor corrects the data and re-submits. Process repeats from step 2.
9. **Once Approved**, the check can be *Closed* by the Supervisor. Status → *Closed*. Inventory deductions are committed.

Floor Check Status Flow

Draft → Submitted → Under Review → Approved → Closed

↓ Return ↓ Reject Returned / Rejected

Approval Record Fields

Field	Description
Entity Type	Type of document being approved (floor_check, receiving, etc.)
Step	Current step in the approval chain
Action	approved / returned / rejected / submitted
Actor	User who performed the action (name, role)
Comment	Optional notes or rejection reason

Field	Description
Version	Increments on each resubmission (audit trail)
Timestamp	Exact date and time of action

13 REPORTING & COMPLIANCE

Reports & Exports

Provides management reports and data exports across all operational modules. Reports can be generated in PDF and Excel formats for internal review, client presentation, and ministry submission.

Roles Involved

Role	Action
Admin / Supervisor / Project Manager	Generate and download all reports
Assistant Supervisor	Access limited operational reports
Client	No access to reports module

Available Report Types

Report	Content	Format
Daily Floor Check	Floor inspection results per floor per shift — planned vs. actual quantities, line statuses	PDF / Excel
Daily Project Summary	Full day operational summary — requests, deliveries, inventory movements	PDF / Excel
Weekly Warehouse Report	Weekly materials stock movements, receipts, transfers, balances	PDF / Excel
Monthly Food Inventory	Full month food inventory — opening balance, received, consumed, remaining, variance per item	PDF / Excel
Monthly Materials Report	Same structure as food inventory but for material items	PDF / Excel
Approval Summary	All approval records for the period — who approved what, dates, actions, comments	PDF / Excel
Operation Requests	All operation requests — status, floor, priority, time-to-complete	Excel
Coffee Break Requests	All coffee break requests — delivery status, floor, items	Excel
Receiving Records	All supplier deliveries — items, quantities, conditions, invoice numbers	Excel
Purchase Orders	All POs — supplier, month, approved vs. received vs. consumed quantities	Excel
Inventory Report	Current inventory status — all items, remaining quantities, status flags	Excel

How to Generate a Report

1. **Navigate** to the Reports section in the main navigation menu.
2. **Select** the report type, project, date range (from / to), and optionally building and floor.
3. **Click Generate Report.** System queues the report with status *Generating*.

4. **Report status changes** to *Ready* when generation is complete.
5. **Click Download** to receive the PDF or Excel file directly to your device.

Quick Export from Dashboard

Dashboard Exports: Every table widget on the Dashboard has an Export (↓) icon in the header. Clicking it instantly downloads the corresponding Excel file without navigating to the Reports section. This is the fastest way to export live operational data.

Arabic Language Support

- PDF reports support full Arabic text using the **NotoNaskhArabic** font.
- Column headers and item names are displayed in both Arabic and English where applicable.
- RTL (right-to-left) layout is applied for Arabic-language reports.

Audit Log Workflow

> *The Audit Log records every significant action performed in the system — who did what, when, and on which record. It provides a tamper-proof trail for compliance, accountability, and investigation.*

Roles Involved

Role	Access
Admin	Full audit log — all users, all modules, all time
Supervisor / Project Manager	View audit log (read-only), filter by date and action
Assistant Supervisor / Client	No access to audit log

What is Logged

Action Type	Examples
Create	New purchase order created, new receiving record created, new client request submitted
Update	Request status changed, inventory balance adjusted, user profile updated
Approve / Reject	Floor check approved, receiving record confirmed, request rejected
Delete	Record removed (logged with previous values)
Login / Logout	User authenticated or session ended
Export	Report generated or data exported

Audit Log Record Fields

Field	Description
User	Full name, email, and role of the actor
Action	What was done (create, update, approve, reject, delete, login, export)
Entity Type	The module/record type affected (purchase_order, floor_check, client_request, etc.)
Entity ID	The specific record ID that was modified
Timestamp	Exact date and time (server time, UTC)

Using the Audit Log

1. **Navigate** to Audit Log in the main navigation (Admin / Supervisor access only).
2. **Apply filters**: date range, specific user, action type, or entity type.
3. **Review** the paginated log. Each entry shows user name, action taken, module affected, and timestamp.
4. **For investigation**: use the Entity ID to navigate directly to the affected record in the relevant module.

Dashboard — Recent Activity Feed

Live Feed: The Dashboard displays the last 8 audit log entries in the Recent Activity section, showing actor initials, name, action, and time elapsed. This gives supervisors instant visibility into what is happening across the system without opening the full audit log.

Immutability: Audit log records cannot be edited or deleted — even by Admins. They serve as the permanent, tamper-proof record of all system activity for compliance and accountability purposes.

DOCUMENT SUMMARY

Mirsad — Cafeteria Operations Management Complete System Workflow Guide

MODULES COVERED

01 · Login & Role-Based Access
02 · User Roles & Permissions
03 · Dashboard Workflow
04 · Client Request Lifecycle
05 · Coffee Break Requests
06 · Operation Requests
07 · Purchase Order Workflow
08 · Receiving Workflow
09 · Food Inventory Workflow
10 · Materials Warehouse
11 · Maintenance Requests
12 · Approval Process
13 · Reports & Exports
14 · Audit Log Workflow

KEY SYSTEM FACTS

- ✔ 5 user roles with fine-grained access control
- ✔ JWT-based secure authentication
- ✔ Real-time dashboard — 30-second refresh
- ✔ Automatic inventory deduction on delivery
- ✔ FIFO / FEFO food batch rotation
- ✔ Multi-step approval chain for floor checks
- ✔ PDF + Excel export for all modules
- ✔ Full audit log — tamper-proof
- ✔ Arabic + English bilingual support
- ✔ RTL layout for Arabic interface
